

River Access

\$70,000 annually

Improvement and Maintenance of Existing Access Sites

HFF is committed to providing public access to the Henry's Fork and its tributaries. HFF works with agency partners to maintain and improve facilities such as boat ramps, access roads, parking areas, and toilets at existing access sites.

Securing Permanent Public Access

Greatly increased use of the lower Henry's Fork has resulted in increased demand for access but decreased willingness on the part of private landowners to continue to provide access at traditional but informally established sites. Building on successful campaigns that secured permanent access at several popular sites on the lower river, HFF will continue to ensure that anglers and other recreationalists are able to enjoy the river into the future.
