

2024 Stipulated Mitigation Plan Update – BGWD Perspective

August 19, 2025

2024 Stipulated Mitigation Plan

- Most often repeated question... “Will it work?”

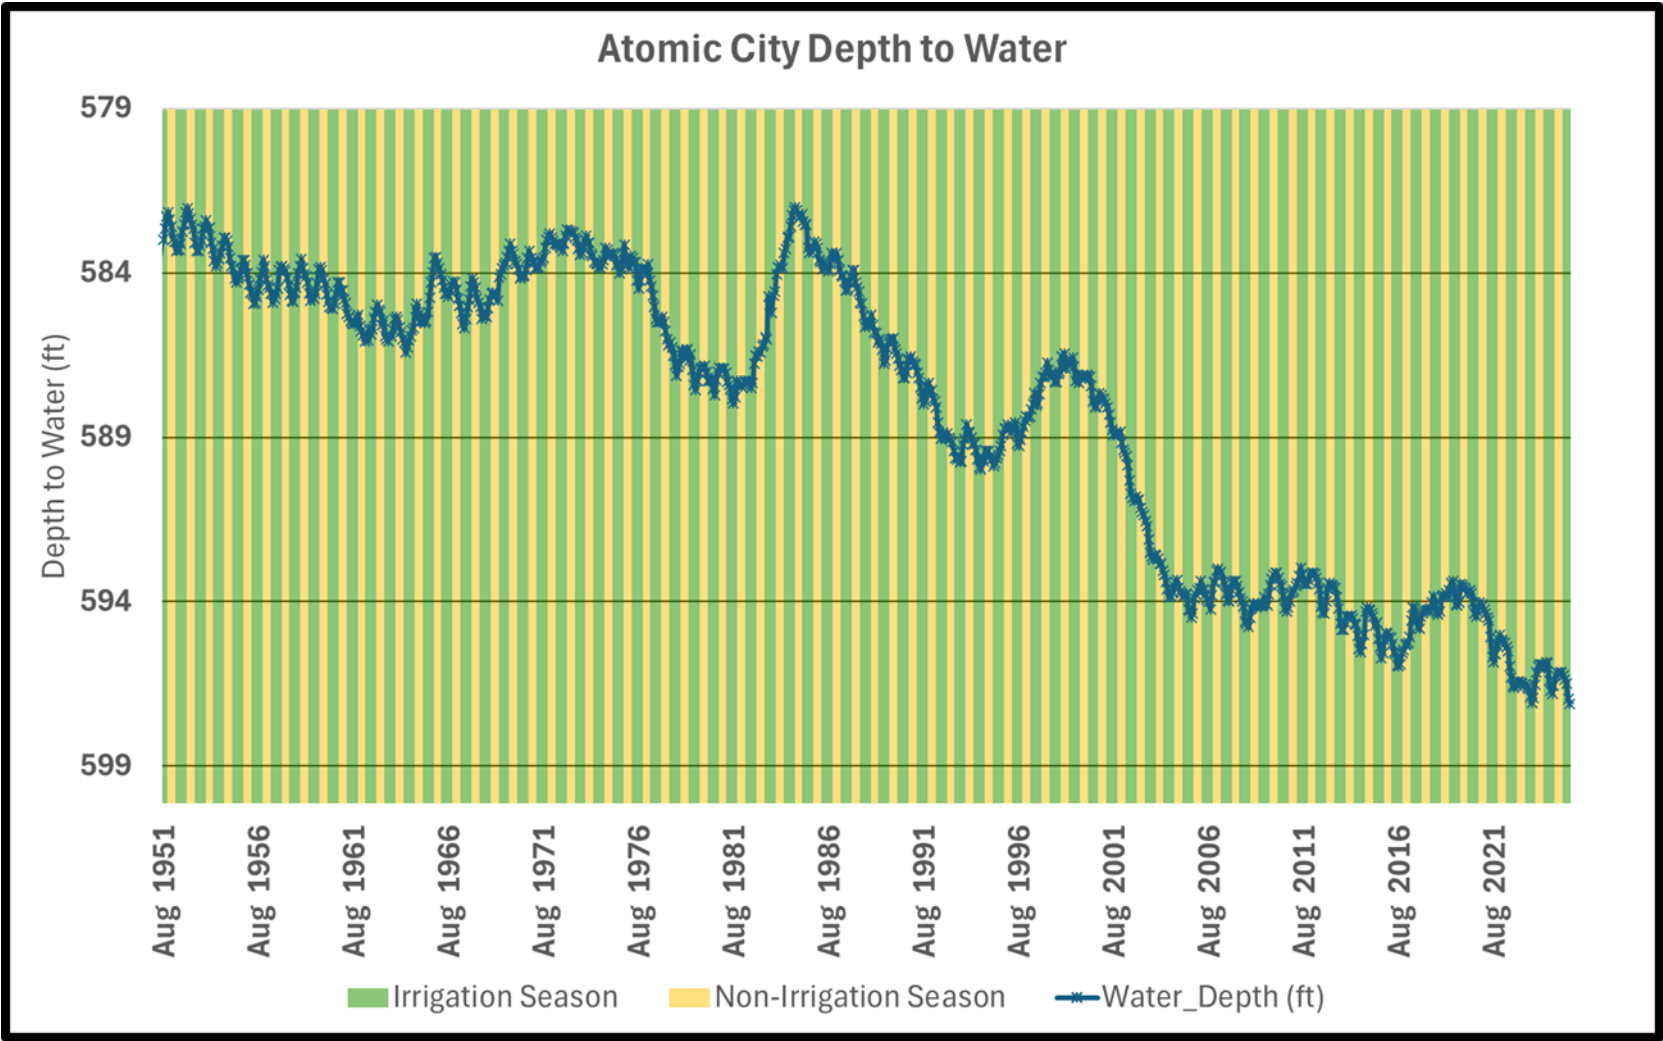

Plan Objectives

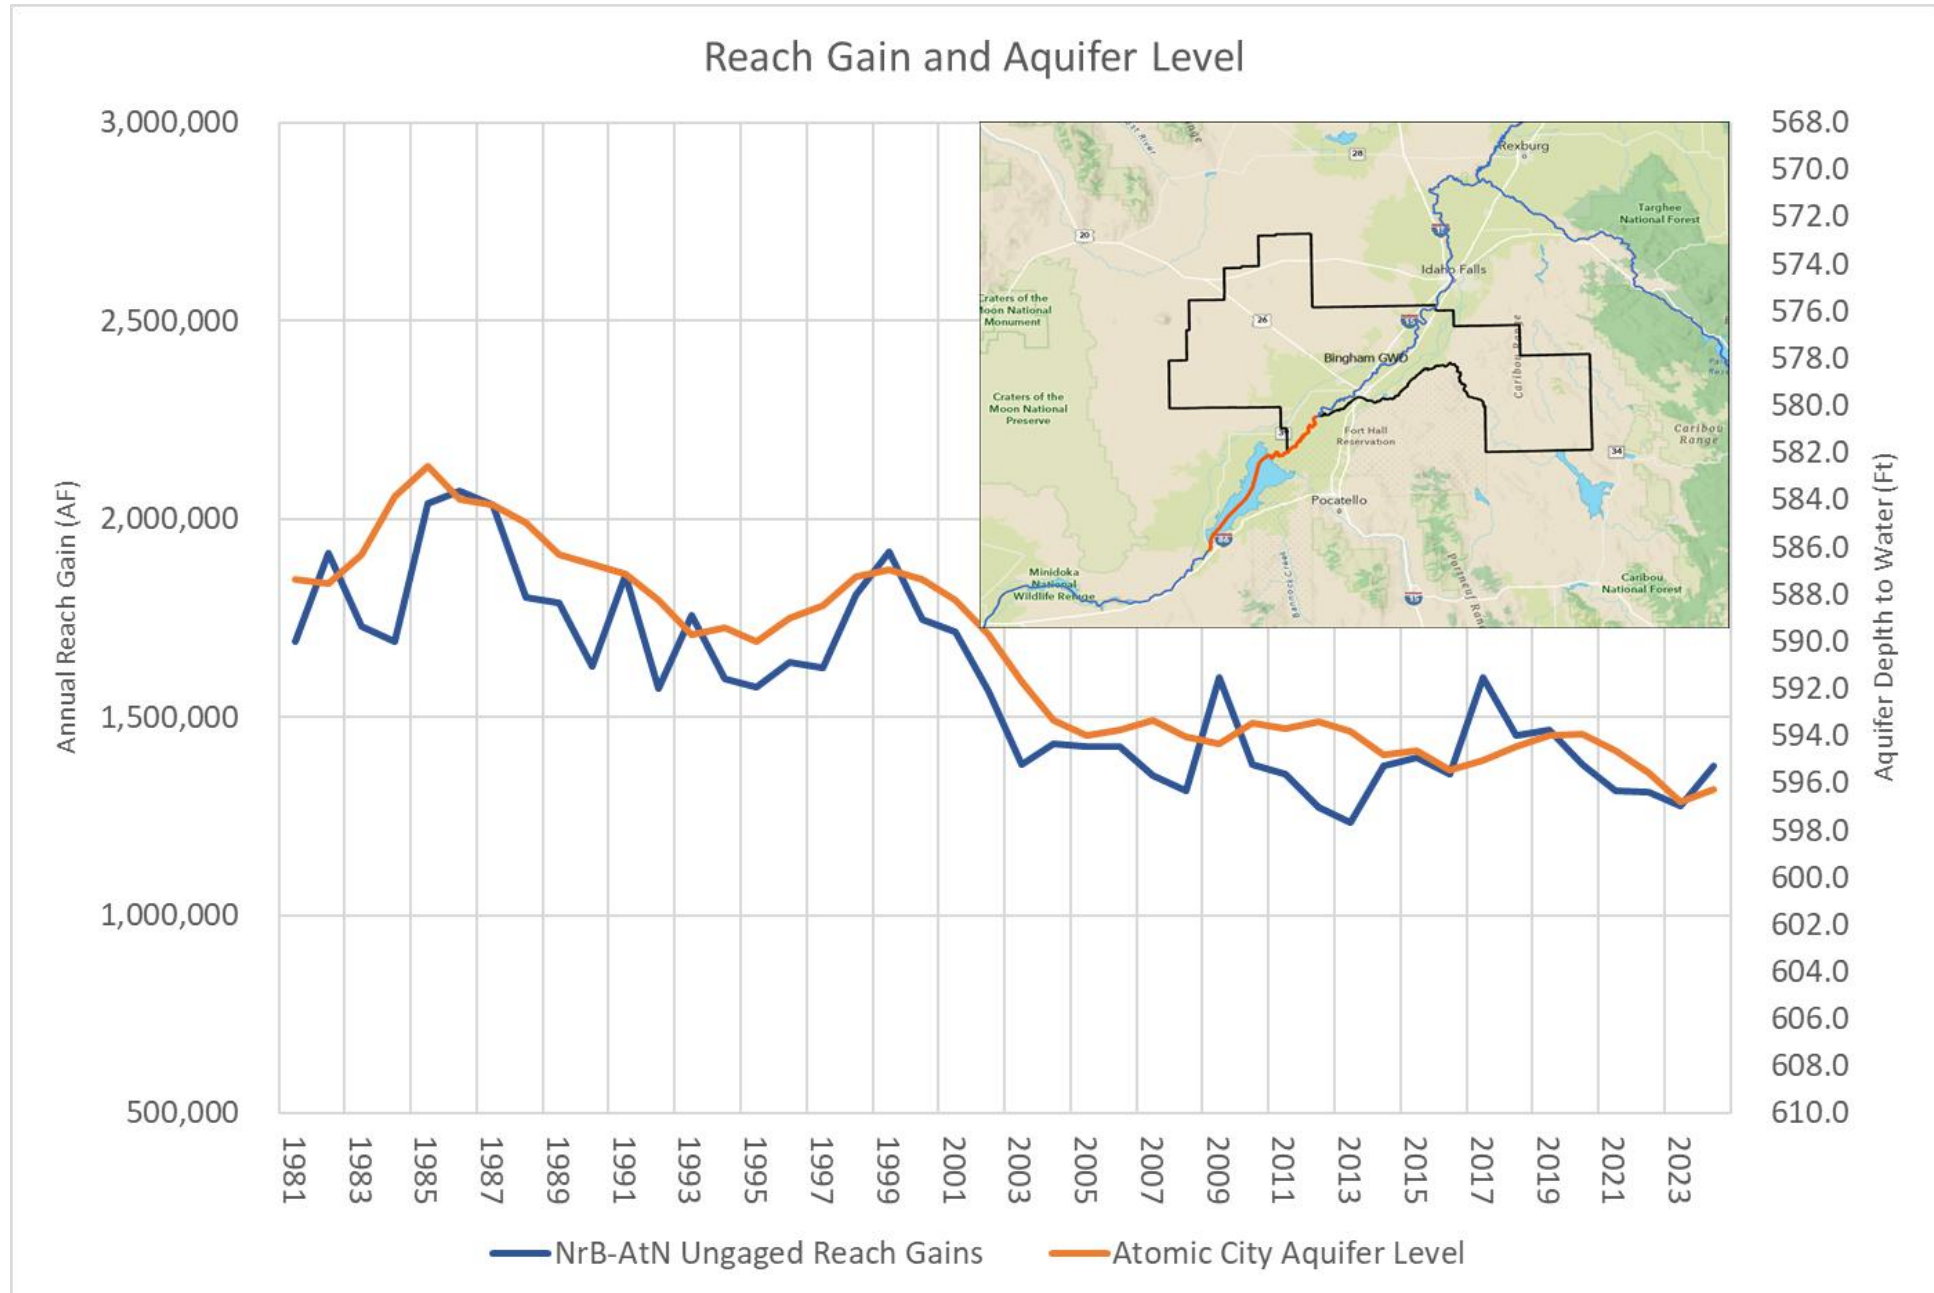

- Stabilize the Aquifer
- Mitigate the Impacts of Reduced Reach Gains

Aquifer Stabilization

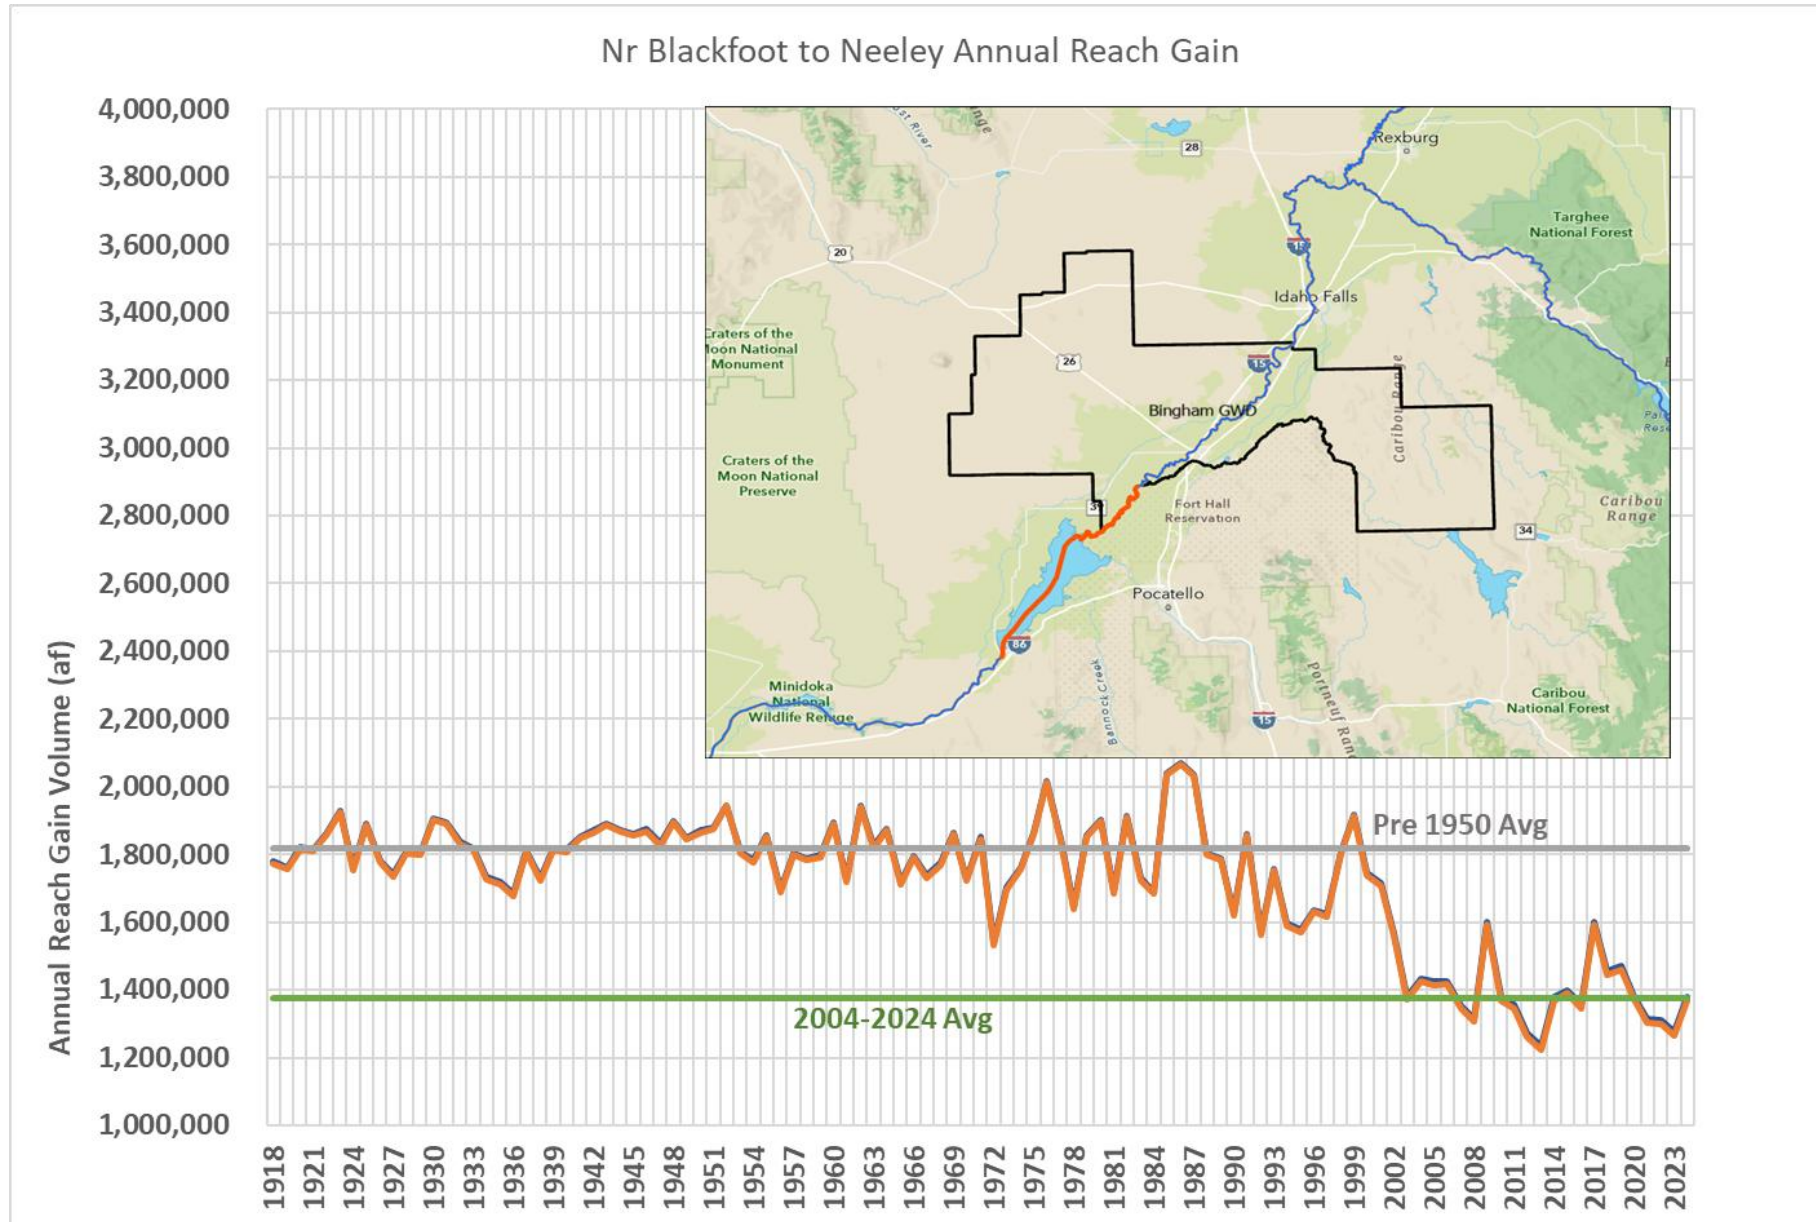

Annual Groundwater Pumping Near Atomic City (af/ac)	Annual Net Aquifer Level Change at Atomic City (ft)
1.87	-1
1.80	-0.5
1.73	0
1.65	0.5
1.58	1

STABILIZE THE REACH GAIN

MITIGATE IMPACTS

MITIGATE IMPACTS

- Provide up to 75,000 ac-ft of mitigation water annually through 2026
- Currently only available through reservoir storage leases
 - We are actively developing alternative means by using super senior natural flow rights
- 2026 Reach gains determine 2027 mitigation requirement:
 - If > 2023 then mitigation remains at 75,000 af
 - If ≤ 2023 then mitigation increases to 82,500 af
- Forthcoming discussions will determine mitigation requirements for 2028 and beyond
 - Most likely based on reach gains and/or aquifer levels
